Sliding Patio Doors

Create a seamless connection between your home and garden while allowing natural light to flood into your living space.

*Glass is a processed product, and minor imperfections are to be expected, for further information please read The Glass and Glazing Federation (GGF) guidelines for acceptable visual quality of glass.

Designed to glide smoothly and effortlessly, patio doors are incredibly simple to use and ideal for modern everyday living. Because the doors slide inline rather than opening inwards or outwards, they are the perfect solution for balconies, patios, conservatories, or any area where space may be limited.

One of the greatest advantages of a patio door is the uninterrupted view it provides. Larger panes of glass and fewer vertical mullions help create cleaner sight-lines and a brighter, more open feel within the home, making the outside feel part of your living environment.

More versatile than many people realise, a two-pane patio door can also be configured so that both doors are able to open independently. This provides additional flexibility should your room layout or furniture arrangement ever change in the future.

Combining practicality, security, energy efficiency, and timeless styling, Inline Patio Doors remain one of the most popular choices for homeowners looking to maximise light, space, and lifestyle.
